

ABSTRACT

Detecting Global North and Global South Discourses after the Covid-19

Discourses of the Global South and the Global North varies drastically. Since 1950 decolonization has been part of the academic research in many areas, especially in Linguistics. In all areas, specially in Social Sciences, great authors, deacons of knowledge have analyzed the many aspects of the colonization, the outcomes and the effects for over 100 years. But it is now, with the eminence of a greater war; after Ukraine and Gaza; after acknowledging that there are 23 wars being held in the globe, that it's mandatory that we take a step back and analyze the hegemonic media discourses of the Global North and South.

The idea of “creating consent” – (Herman and Chomsky, 1988) is that the hegemonic media present many articles in order to create a mass of consonant opinions, responsible for misleading the perception of the greater public around themes that are as crucial in today's political scenario. This concept is far beyond doubt, accepted by the academia. By creating a universe of undisputable truths, the media designed ideologies. For over two years the question, for linguistics is: can we use the geopolitical arena to understand the way the Global North hegemonic media outlets, push a perception, hence the imperialist forces perceive colonization, see themselves and the world? Understanding at same time the way the Global South sees the world, themselves and the many processes of decolonization? Our methodology involves Lexical Multidimensional Analysis (Berber Sardinha, 2019, 2020; Berber Sardinha & Fitzsimmons-Doolan, in prep.; Fitzsimmons-Doolan, 2019, forthcoming; Clarke et al. 2022), stemming from Multidimensional Analysis (Biber, 1988).

Newspapers of the Global North:

USA: New York Times, Washington Post

UK: The Guardian, Daily Mail

Ue: The Times

Newspapers of the Global South:

Russia: The Moscow Times, Russian RT

Iran: Tehran Times

South Africa: News24, Daily Maberick

This approach detects underlying discourses in a corpus, which in this study comprises _____.

We identified XXXX lexical discursive dimensions, each encompassing various interdiscourses: _____.

All dimensions will be presented and discussed.

In conclusion, this research contributes to a deeper understanding of discursive practices related to Global North and South, their look upon this new wave of neo-colonization and supports the open science movement in the Humanities, especially in Applied Linguistics.

Keywords: Ukraine, genocide, Gaza, Israel, IDF, refugees, war, colonialism, decolonialism, US international politics, UN international politics, Russia, UN.

State of art

Many researches have studied the aspects of decolonization, promoting local voices, 'disinvention' of colonized languages, language barriers, mobility and identity and epistemological racism and Eurocentric dominance, all in the linguistic fields up to know, with great assertiveness and forming a construct of concepts that will be involved in this study, and yet none have studied the discourses that surround the wars that followed the COVID-19 and their aspects in the hegemonic media that were found online and portrayed the extended use of language in order to create consent that presented many divergences when looking upon one or another event. As the Global North hegemonic media still forces an imperialist predominance into their discourses, the Global South, aware of its fragile economic and political governance towards the North, when expressing their point of view, manage to talk more openly and closer to the truth of the events portrayed. Hence, the difference in language, linguistic models appears as a symptom of mannerisms in order to say and more effectively to hide the ideology behind the article.

Lacuna

- Due to Linguistic hegemony and epistemic and theoretical dominance, the newspapers found in English in other countries that are not English Native speakers are mainly translated. A glaring lack of geographic and linguistic diversity exists in the empirical base of published research, with Western, educated, industrialized, rich, and democratic (WEIRD) contexts being overrepresented in linguistics studies. This means that the vast majority of the world's languages and multilingual contexts in the Global South remain under-researched or studied through a "deficit lens".

The overall lacuna highlights a need for more socially just, inclusive, and decolonial approaches that promote equitable partnerships and validate diverse voices and knowledge systems in the field of linguistics.

Objectives

Show the diversity of discourses that are presented by both the Global North and South. As the mass medias in the Global North's hypocritical and consent creator may show the biases programmed governmental engineered mass information designed to create and profit through war, the Global South struggles to untie the long chains of servitude through setting a more reliable discourse around facts and unveiling the truth, the context behind what is being said. In the case of Russian media, that outlets also a powerful engineered partial campaign of sovereignty against Ukraine, analyze the contrasts will show the power grip behind the hegemonic media. Ideology is a key part of what is being said or concealed and how it plays a part in the diversity of the universe around us.

Method

Through factorial LMDA (lexical Multidimensional Analysis) we will analyze the collected corpus and investigate the variations of lexical patterns, their co-occurrence and how often they appear through statistical analyzes that constitutes dimensions. Those dimensions shows the grouping of lexical choices that tend to exemplify an universe of thoughts, hence, ideology, shows the latent discourses that represent what the media outlets are engaged to defend and co-create with major hidden forces.

Final considerations

Western media mediates hegemonic interests through, either the by: framing of crises in the Global South, or creating the crises to exhort their power. By shaping public perceptions, international responses, and policy priorities in global governance. By analyzing selected media coverage of humanitarian emergencies, political unrest, and developmental issues across Africa, Latin America, Middle East, Europe and parts of Asia, the study reveals recurring patterns of representation rooted in colonial discourses, stereotypes, and power asymmetries. These narratives often depict the Global South as dependent, chaotic, or perpetually in crisis, while obscuring historical and structural factors such as imperialism, colonialism, foreign intervention, and global economic inequality.
